### CLUTCH ASSEMBLY

Service solution for cases of noise/difficulties in engaging gears

Version: Petrol 4x4

### TYPE OF PROBLEM

Clutch noisy/difficulties in engaging gears with pedal fully depressed on account of interference between the spring and the driven disc.

### SERVICE SOLUTION

Check and/or adjust the clutch pedal travel and, if necessary, replace the assembly.

### Operating cycle

Checking clutch pedal travel:

- Make sure that there are no obstacles which restrict the total travel of the clutch pedal (remind the Customer to avoid using extra mats under the pedals).
- Let the clutch release bed in by fully depressing the pedal 3 or 4 times.
- Check that the travel of the clutch pedal between the rest position and the end of travel position (see diagram) is equal to  $127 \pm 5$  mm.

Adjusting clutch pedal travel:

- Working on nut A and lock nut B take care to prevent the rotation of the cable during the adjustment operation.

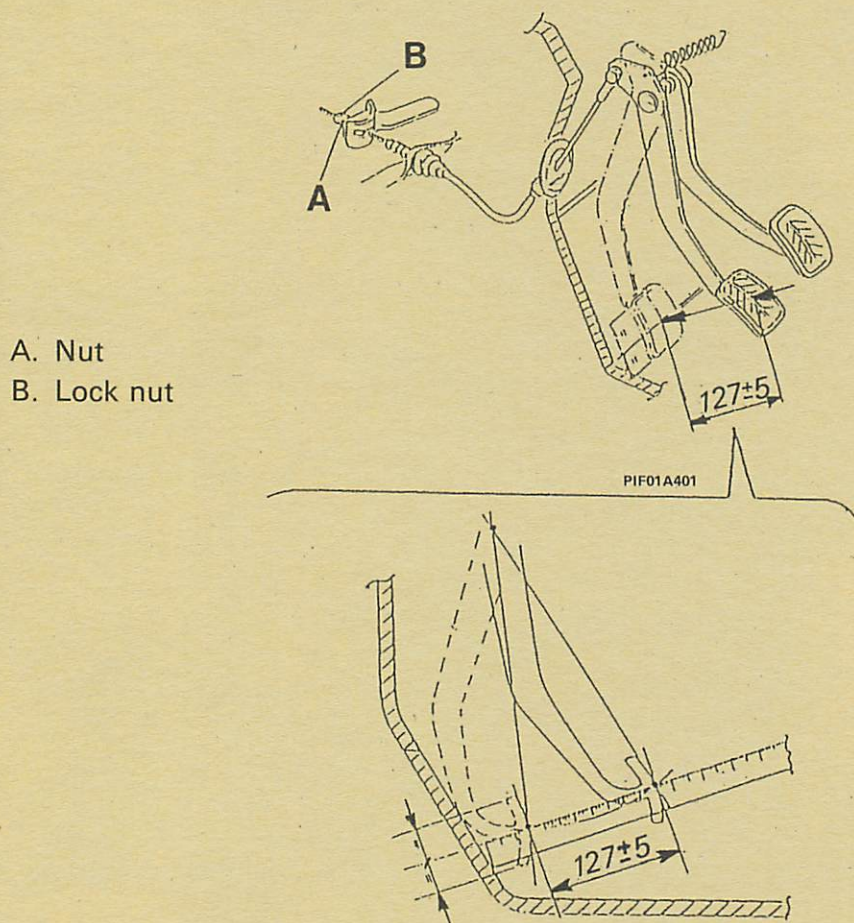

**NOTE** *If after having carried out the operations described above the problem has not been solved, replace the clutch assembly with one ordered from the Parts Division no. 5892499 (supplier Valeo).*
