

Wipers, Washers and Windscreen

The windscreen must be free from excessive cracks, chips and scratches - basically, you're allowed damage up to 10mm (approx. ½ inch) in front of the driver and 40mm (approx 2 inches) in front of the passenger

The windscreen washer fluid must hit the windscreen, and supply a sufficient amount of fluid to do the job

The wiper blades must not be damaged, and must not leave streaks on the windscreen and move at a sufficient speed to clear the windscreen from rain

The wipers must park in the down position (unless manufactured not to do so)
